

Genetic tests in Leonbergers: LPN1 + LPN2 + LEMP

(April 2017)

For **Leonberger** dogs a total of three genetic disorders were genetically characterized by the Universities of Bern and Minnesota, and genetic tests developed. **A single blood sample per dog** is sufficient to perform the detection of the causative mutations for two forms of *polyneuropathy* (**LPN1** and **LPN2**), diseases affecting the peripheral nervous system, and for *leukoencephalomyelopathy* (**LEMP**), a recessively inherited disorder of the central nervous system.

The genotypes of analysed dogs are reported for each disorder individually as:

N/N (clear), **D/N** (heterozygous carriers) und **D/D** (homozygous).

Further information and breeding recommendations at www.genetics.unibe.ch

For genetic testing a **1-5 ml EDTA blood** sample of the animal in question is required. Blood samples should be labelled properly. Please use an individual order form for each single dog.

Please send the samples together with the signed order form in a padded envelope without cooling to :

In case of questions please contact us per e-mail
cord.droegemueller@vetsuisse.unibe.ch or per
phone **0041 (0)31 631 25 29**
Prof. Dr. Cord Drögemüller

**Institute of Genetics
Leonberger-Gentest
Bremgartenstrasse 109a
CH-3001 Bern**

All three tests from the same dog cost **175 CHF/EUR**. A single test (of choice) costs **100 CHF/EUR**, and two tests (of choice) from the same dog cost **150 CHF/EUR**.

Once the sample arrived our lab we perform the tests and send you results and an invoice with payment instructions (including details as IBAN, BIC) as PDF-file by e-mail. As we cannot run the complete procedure for single individual samples, it may take 2-8 weeks until a result is obtained.

Test (please check): **LPN1** **LPN2** **LEMP**

I agree to genetic testing in the animal indicated above I also agree that the test results and sample material may be used for further scientific research. The leftover sample material will belong to the University of Bern.
